The DR audit report will form the basis of your on-going DR plan and will sit well within your Business Continuity Planning process

## HOW WILL YOU COPE IN THE EVENT OF A DISASTER?

Disasters can strike at any time, any place and any company. Last year's floods in Cumbria and swine flu, highlight the risks we all face from natural born events. Other common risks such as theft, fire, hardware failure, and service provider outage must not be ignored.

Studies show that most SME businesses are not ready to cope following an outage. Many businesses do not recover following a partial or full outage as product/service delivery can be impacted beyond repair. Disaster Recovery is fast becoming a pre-requisite for businesses of all sizes.

How ready is your business? Do you have a Disaster Recovery plan for your IT and Telecoms? If the answer is no you are risking your business' future.

Let us provide you with the blueprint for an ever changing DR plan by conducting a full independent audit. The results of the audit will allow you to plan better for an outage and with our recommendations will allow you to think about where you should invest for the future of your business continuity
